

# Electrical Power Box Installation

## Appendix 4

During the Summer season, the Grounds Person noted that at public events, a temporary solution for supplying electricity for performers, was needed frequently. Whilst safe on a very temporary basis, the Grounds Person has recommended that a permanently safe solution needs to be found, so that the Council and Event Entertainers can feel secure in the knowledge that any event can be properly executed.

The Grounds Person has supplied an initial quote from a Contractor, to provide an indication of possible costs and will source x2 alternative quotes for comparison. The Grounds Person is suggesting that the additional electrical points could be installed at the Coastguards building and wishes to emphasise that permission to do so, has not yet been sought. Members should note that costs could be deducted from the £2000.00 Esplanade maintenance budget which has remained unused this financial year.

He has said:

***This quote is subject to getting permission from the Coastguard to access their building, connecting to their power supply, and fitting a small metal box on their wall to house the sockets and meter. I noticed in the Free Press on Friday that they have recently applied for planning permission for new windows, roof, and upgrade to their heating system, so this may be a good time to approach them if they're having major work done in the new year.***

### **Recommendation**

That members are to approve the Grounds Person acquiring x2 further quotes for the installation of a new Power Box with fuse board and sockets to be installed at the Esplanade and to approach the Coastguards to seek permission for the power box installation and to fund installation through the Esplanade maintenance budget which currently stands at £2000.00
